State of Utah

Planning Districts, Counties, and County Seats

Overview

Overview

Purpose:

Utah's seven associations of government¹ have produced these city and unincorporated area population projections for each year from 2000 through 2005 and for the years 2010, 2020, and 2030. These are consistent with the county population projections produced by the Governor's Office of Planning and Budget in January 2000. GOPB has coordinated the effort by providing data, technical assistance, and general guidelines for the work. The current series is a revision of the subcounty population projections that were produced in December 1998.

Background:

There are a variety of uses of city level population projections. State law² requires that municipalities and counties develop plans for affordable housing. The catalyst for these city population projections is the implementation of the 1997 General Legislative Session's House Bill 295, along with state agency, MPO (Metropolitan Planning Organization), and local planning efforts. The associated need assessments are based in part on small area (municipality and the unincorporated balance of the county) population projections for the next five years.

At the State government level, agencies (such as the Department of Water Resources) use twenty-five year city projections to plan for capital facilities. For example, the projected size, composition, and location of the population and productive activity affects the anticipated demand for publicly supplied goods and services, such as transportation, education, health, and water. It also has implications for open space and for water and air quality. The MPOs use small area projections for long range transportation planning and policy evaluation purposes. In addition, the Governor's Office of Planning and Budget (GOPB) receives many requests for small area population projections.

This is the third time that GOPB and the AOG's have collaborated to produce subcounty population projections. In 1997, the first time subcounty projections were produced, GOPB hosted a workshop to help with the coordination of the AOG analysts in preparing the projections. The institution of an ongoing process to produce city productions on a regular basis has helped to greatly improve the quality of the numbers since the inception of this program.

¹ The seven associations of government are Bear River AOG (Box Elder, Cache, and Rich counties), Five County AOG (Beaver, Garfield, Iron, Kane, and Washington counties), Mountainland AOG (Utah, Summit, and Wasatch counties), Six County AOG (Juab, Millard, Piute, Sanpete, Sevier, and Wayne counties), Southeastern AOG (Carbon, Emery, Grand, and San Juan counties), Uintah Basin AOG (Daggett, Duchesne, and Uintah counties), and Wasatch Front Regional Council (Davis, Morgan, Salt Lake, Tooele, and Weber counties). Mountainland AOG and Wasatch Front Regional Council are also metropolitan planning organizations (MPOs).

² See Utah Code Annotated 1953, Sections 10-9-307, 17-27-307, 63-28-11.

Methods:

Regional Projections: County level population and employment projections are produced by the Governor's Office of Planning and Budget; the most recent were produced in January 2000. These are generated with regional economic / demographic models that account for economic growth / decline, births, deaths, and the movement of people into and out of the area. While GOPB has considerable investment and expertise in regional models, it does not currently have small area allocation models.

City Projections: In general, small area population projection models operate with a different logic and require different data than do regional models. For example, even if there is a fairly accurate indication of the demographic effect of the Olympics on the greater metropolitan area, that doesn't necessarily address how the resident population of West Valley City will be affected. In order to answer this question, it is necessary to know about current land uses and zoning policies. It is also important to evaluate the current and anticipated planning documents, the relationship of the city to the larger metropolitan system, anticipated changes in the transportation system (and their effects), and projected costs of living and doing business as compared to other areas along the Wasatch Front and Back. Once these types of "baseline" projection information are more clear, it is possible to begin a detailed inquiry into the geographic distribution of Olympic impacts. Clearly, this is a data-intensive endeavor.

GOPB provides preliminary spreadsheet models and on-going and extensive technical consultation to analysts at each of the AOGs. The initial models are simple extrapolations maintaining constant proportions of the county for each small area. In other words, the starting point of the analysis is to assume that all areas in a given county will grow at the same rate.

AOG analysts improve on this starting point by systematically considering a whole range of locally specific information such as current land use, the availability of developable land, planned changes in major infrastructure, planning documents, anticipated annexation, known future events affecting population, and so forth. In many cases, local experts review provisional projections. The extent of this research depends upon the existence and reasonable availability of necessary data and the resources that each AOG brings to bear on the project. For example, Wasatch Front Regional Council and the Mountainland Association of Governments already maintain data and analytical models to generate small projections.

In most cases the 1998 city and county population estimates generated by the Census Bureau were used as the basis of the forecasts. In a few instances Census Bureau city population estimates were not available, such as when a new incorporation or annexation had taken place. When this happened, a population estimate produced by the Utah Population Estimates Committee was used as the base population. Beyond the base year, AOGs projected the distributions of the cities and unincorporated areas while controlling to GOPB produced county projections.

The amount of documentation of method and result varies across counties. Essential points are noted in footnotes to each county table. Some AOGs have also provided additional footnotes or descriptions of general procedure.

Further information:

General questions about the city projections effort or the projections of county totals may be directed to GOPB at (801) 538-1036. Specific questions concerning sub-county areas should be directed to the appropriate AOG contact noted on each county table. This data is also available on the GOPB website at <http://www.governor.state.ut.us/dea>.

Notes:

- 1) All populations are July 1
- 2) County totals for 2000 through 2030 are the Provisional 2000 Baseline.
- 3) Subcounty projections are based on the 1998 estimates from the Census Bureau
- 4) 2000 through 2030 subcounty numbers have been produced by Five County AOG analysts controlling to GOPB county totals
- 5) Initial projections of subcounty populations maintained a constant share based on the distribution in the 1998 Census Estimates.
- 6) AARC = Annual Average Rate of Change, 2000-2030

Notes:

- 1) All populations are July 1
- 2) County totals for 2000 through 2030 are the Provisional 2000 Baseline.
- 3) Subcounty projections are based on the 1998 estimates from the Census Bureau
- 4) 2000 through 2030 subcounty numbers have been produced by WFRC analysts controlling to GOPB county totals
- 5) Initial projections of subcounty populations maintained a constant share based on the distribution in the 1998 Census Estimates.
- 6) Holladay and Herriman are both included even though they were not listed in the 1998 Census Bureau estimates. They incorporated in 1998 and their population estimates were produced by GOPB.

Notes:

- 1) All populations are July 1
- 2) County totals for 2000 through 2030 are the Provisional 2000 Baseline.
- 3) Subcounty projections are based on the 1998 estimates from the Census Bureau
- 4) 2000 through 2030 subcounty numbers have been produced by Five County AOG analysts controlling to GOPB county totals
- 5) Initial projections of subcounty populations maintained a constant share based on the distribution in the 1998 Census Estimates.
- 6) The projections for St. George City are more elusive than for other areas in the state mostly due to the "Snowbird" population. Individuals may reside in St. George for the largest portion of the year and continue to list their primary residency as another location. This factor makes it extremely difficult to determine the population of the city. Utility meters and hook-ups are generally a good source of information upon which to evaluate population, however those hook-ups may remain functional while no one occupies the residence. For these reasons the population for St. George City could fluctuate greatly. For example the July 1, 2000 estimate could be as high as in excess of 51,000 people.
- 7) AARC = Annual Average Rate of Change, 2000-2030

Appendix B Association of Governments Documentation Notes

Uintah Basin Association of Governments

The Uintah Basin Association of Governments staff did a survey asking the cities within our region what they believed to be their population. The numbers we received were very close to what [the GOPB] spreadsheet entailed with a few changes made.

Our concern is the estimates given to the counties. Duchesne County is expecting growth due to the Wolf Creek Road being finished and maintained, which will make the west side of the county more accessible to the Wasatch Front. Also, with the privatization of Dutch John in Daggett County there is an expected increase in population to 1000 residents over time. There is also a new subdivision in Daggett County that is in the process of being constructed, which is expected to accommodate 88 new homes.

Wasatch Front Regional Council HB 295 City Projections Documentation

City projections for Salt Lake, Davis, and Weber counties were created using analysis of satellite imagery to determine holding capacity. Historical data were used to estimate a growth rate. The median growth rate was applied to the base population until the projected population reached 90% of build out. At that point the growth rate was halved, halved, and then halved again. Projections were circulated to cities for their comments and changes were made according to those changes.

Morgan and Tooele counties' city projections were made using a share method. The share of total from the previous projection effort was applied to the total. The projections for Tooele County were reviewed for reasonableness.
